

# **2024 Penn Genetics Symposium**

## ***Human Genetic Variation and Gene Expression***

**Tuesday, April 30, 2024**

**9:30 am to 5 pm**

**Gaulton Auditorium and Commons, Biomedical Research Building.**

This year's symposium will delve into the latest advances in understanding the relationship between genetic variation and gene expression and the resulting impact on human health and disease. It will feature short talks from speakers drawn from the Penn Genetics community, and external keynotes from Dr Gina Peloso (Boston University) and Dr Stephen Montgomery, (Stanford University).

Attendees can look forward to a series of insightful lectures, collaborative discussions, and an interactive poster session, all designed to foster a deeper understanding of genetic diversity and its significance to biomedical research and practice. This event allows faculty and students to engage with cutting-edge science, network with peers, and shape future research directions.
